

OCR Boundary Sample

License: CC0-1.0. Synthetic sample generated for the Carrel public beta demo library.

This short source represents a scanned-document boundary case for first-run testing.

A real scanned PDF may need OCR before Carrel can extract reliable chunks.

When extraction quality is low, the app should say so directly and keep the source visible in the Jobs Tray.

Trust comes from clear status: importing, extracting text, indexing, ready, partial, or failed.
