

The study workspace that turns your deadlines into a system. Drop in any file you study from. Carrel plans your week, runs the spaced review, and keeps every answer honest with citations you can click and verify.

Universal ingest: PDFs, slides, Word docs, Markdown, Excel, plain text, and audio/image roadmap. Deadline-anchored Plan view that schedules against your real calendar. Spaced-repetition review tied to what you actually owe on Friday. Grounded Ask where every claim cites the verbatim span.

PROBLEM

Studying is eight apps and a calendar that lies.

- No tool ties what you study tonight to what you owe Friday. Calendars are passive; study apps are deadline-blind.
- Lectures are PDFs, slides are PPTX, notes are Markdown, syllabi are HTML. Each tool owns one format.
- AI study tools fabricate. A student cannot ship a wrong answer to an exam.

INSIGHT

The deadline is the unit of work.

- Start with the exam, the paper, the deliverable. Everything else allocates against it.
- Universal ingest (10+ formats today) so the format never blocks the workflow.
- Spaced review and concept graph compound across the semester; switching costs the term.
- Citation chip flies to the source span on click. Verification in one gesture.

COMPETITIVE POSITION

	DEADLINE PLANNING	UNIVERSAL INGEST	SPACED REVIEW	CITED ANSWERS
Notion AI	No	No	No	No
Quizlet / Anki	No	Partial	Yes	No
NotebookLM	No	Partial	No	Partial
ChatGPT Study Mode	No	Partial	No	No
Carrel	Yes	Yes	Yes	Yes

Student · \$10/mo

.edu verified. Full product. The wedge. Cohort-viral inside study groups.

Pro · \$20/mo

MBA, residency, bar/CFA prep. Outcomes-bound buyers; same engine, higher price.

Group · \$8/seat

Study groups, tutors, small cohorts. Shared library and shared deadlines.

BUILD PROOF (VERIFIABLE IN REPO)

- 9 features end-to-end shipped in production-grade macOS app, Android via Capacitor next.
- 710 tests passing: 346 frontend (Vitest), 364 backend (pytest).

WHY NOW

- Students churned through 8 AI tools in 18 months and hate them all. The workspace that ties to deadlines wins.

- 10 file formats ingested today: PDF, DOCX, PPTX, MD, TXT, CSV, TSV, XLS, XLSX, Markdown.
 - 47 KB entry JS bundle, gzipped. 60fps citation flight in WKWebView.
- Cohort-viral distribution: one student in a study group brings 4-7 more, semester-paced.
 - AI-native study budgets exist now: students already pay \$50/mo across Notion, Quizlet, ChatGPT.

HONEST FRAMING

Zero paying users today. The ask funds the path to first paid revenue: 50 student design partners across 5 universities in 90 days, Stripe live on the .edu tier, 1,000 paying student subs as the kill-or-keep metric at month 12.

ROUND	CAP	RUNWAY	FIRST HIRE	KILL METRIC
\$750K SAFE	\$6M post	12 months	Senior eng (Android)	1,000 student subs
